

## School of fine Arts, Nantes

Location : Nantes

Architect : Franklin AZZI Architecture

Client : SAMOA / EPCC ESBANM / Nantes Métropole

Package : Roof and cladding (polycarbonate panels), timber frame façade and glazing

Scope : Technical conception and execution of façades, cladding and roofing

Date : 2013-2017

An old industrial site close to Nantes downtown are reconfigured for the new School of Fine Arts. The structure of the existing hall is reused to support a new roof and a new transparent polycarbonate cladding. The hall serves rain barrier which take place in the areas of the school organized in two buildings distributed by a central internal street. The façades are isolated and dressed by the colored membrane.

Due to new seismic risk rules, T/E/S/S conducted some research on polycarbonate cladding. It was also necessary to provide technical details to meet these regulatory requirements while developing the architectural image desired.
